In the Abstract:

Medical skin patches for treating colds by releasing essential oils through evaporation comprise comprising a backing layer permeable to gas and water vapour and a hydrophile and pressure-sensitive adhesive polymer matrix connected to the backing layer. thereto, said The matrix contains containing the following: at least one essential oil, at least one hydrophile polymer, at least one substance having an adsorbent effect or/and at least one substance having an emulsifying effect, and at least one pressure-sensitive adhesive polymer[[, with]]. [[the]] The water content of [[said]] the matrix is [[being]] less than 5% by weight, preferably or even less than 1% by weight.
